

# ECONOMICS

## COLLEGE OF BUSINESS

### Courses

In addition to a core set of economics courses, you'll take adjunct liberal arts courses in the departments of accounting, political science, math, and more.

Here is a sample of what you can expect to learn:

#### Principles of Macroeconomics

This course explores various theories of inflation and unemployment, economic growth, money, banking, interest rates, business cycles, exchange rates, trade balances, and the balance of payments, deficits, and the national debt to help students better understand the performance and behavior of an economy.

#### Intermediate Microeconomics

In this course, students dive deeply into topics including the analysis of the market and firm coordination, the theory of consumer behavior and demand, the theory of supply and competition, the pricing of goods and resources, and government policies with a focus on decision-making in a modern economy.

#### International Economics

This course considers the study of economics from a global perspective with topics such as exchange rate systems, international monetary arrangements, adjustments in international disequilibrium situations, relationships among rates of exchange, inflation, interest, and unemployment, and domestic and international economic policies. It also considers various theories of competitive advantage in international trade, the nature and effects of commercial policies, and international economic integration.

### **"In my day, movies only cost a nickel!"**

Principles like inflation can explain this and other major changes, and we need economists to apply them. It's no secret that we're facing a crisis in our national economy. You know who's looking to hire people like you? Presidents. Heads of state. Leaders who need to know what to do to save the wallets of not just one business but of a community or a nation. Our program will give you a well-rounded liberal arts education to help you apply the broad theories you'll learn in economics classes to better understand the movement of money.
